

# Is your business vulnerable to a computer failure?

FATAL  
ERROR

We can show you how to keep your computers running smoothly and to safeguard your information!

*The InfoGuard Information Risk Analysis*, Phase 2 of our 5 Phase Process, will describe, in detail, the specific actions you need to take to eliminate:

- the security threats and the risks of losing data in your computing environment.
- weaknesses that would prevent a full and timely recovery in the event of a failure.
- nagging, but avoidable, computer glitches that compromise data integrity and destroy productivity.
- the hassles of maintaining a computer network.

WHEN YOUR COMPUTERS  
DON'T WORK... NEITHER DO YOU

## This is what we will do

Your InfoGuard technician will use a combination of interviews and hands-on computer examination and testing to uncover specific, prioritized actions you should take to mitigate any risks and to improve the overall operations of your computer systems. The analysis typically takes from a half to a full day to complete and will cover the following:

- Computer configurations and procedures
- System, data and internet access
- User, account and password management
- Software updates, patches and licensing
- Backup and recovery
- Virus and spyware protection
- Firewall implementation and wireless security
- Systems monitoring
- Information and physical security
- Disaster recovery

## What you get

- A comprehensive, customized report comparing your computers and environment to best practice standards established by industry leaders such as Microsoft.
- A specific roadmap for you to bring your computers and operations up to those standards.

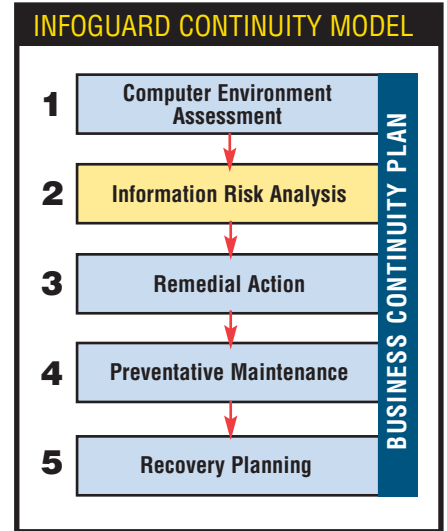

*See an example at: [www.infoguardcorp.com/IRA](http://www.infoguardcorp.com/IRA)*

## The benefits to you?

Let's face it. Computers and computer networks are a challenge to the average small business. While they've become easier to use they have also become more complex to manage and troubleshoot. Failure to plug your security gaps or to establish sound operating procedures exposes you to damaging threats and constant computer problems. You can react to problems or you can prevent them from happening. Why prevention benefits you:

- Allows you to focus on your business, not computer issues
- Makes sure your information is there when you need it
- Improves employee productivity and morale
- Increases customer satisfaction
- Reduces costs
